# Routes of Scafell Pike

Description

500,000 routes were extracted from OS Maps - these are routes that have been input by users and made publicly available. A series of statistics were generated to uncover the most popular locations for routes in Great Britain, based on a 1km grid. This is one of the maps that was produced to support the statistics and it shows a zoomed-in view of the most popular grid square 'NY2071' which contains Scafell Pike. The 1:25 000 Colour Raster was used to add context of the footpath network and a multiply blend was applied to the routes to show density; overlapping lines appear darker.
